35 Feet in Still Air

The picture below shows construction of the turret with enclosed ball bearings. This turret is manufactured to give years of trouble-free operation along with ease of use.

The beater chamber is large enough to break the bales of straw in an extremely short time. The beater chamber chains are hardened to give extra long life to your equipment.

Bowie's MG-30 is the smallest of our manufactured Aero-Mulchers. We believe this strawblower to be the strongest of the small models in the industry. This unit is powered by a Kohler 27 hp engine. It has an electric starter with a full pressure lubrication oil cooler and the electronic fuel injection saves up to 25% in fuel cost. Our turret spins freely on ball bearings with grease fittings for easy maintenance. This machine comes standard with a vacuum port for those clean-up jobs. The **Bowie MG-30** is designed forklift ready for easy loading.
